

Introduction

In this assignment I will have planned a design for the Mobile World Station website to promote information about mobile phones, with pages about different parts of mobile phones that a user would need to know.

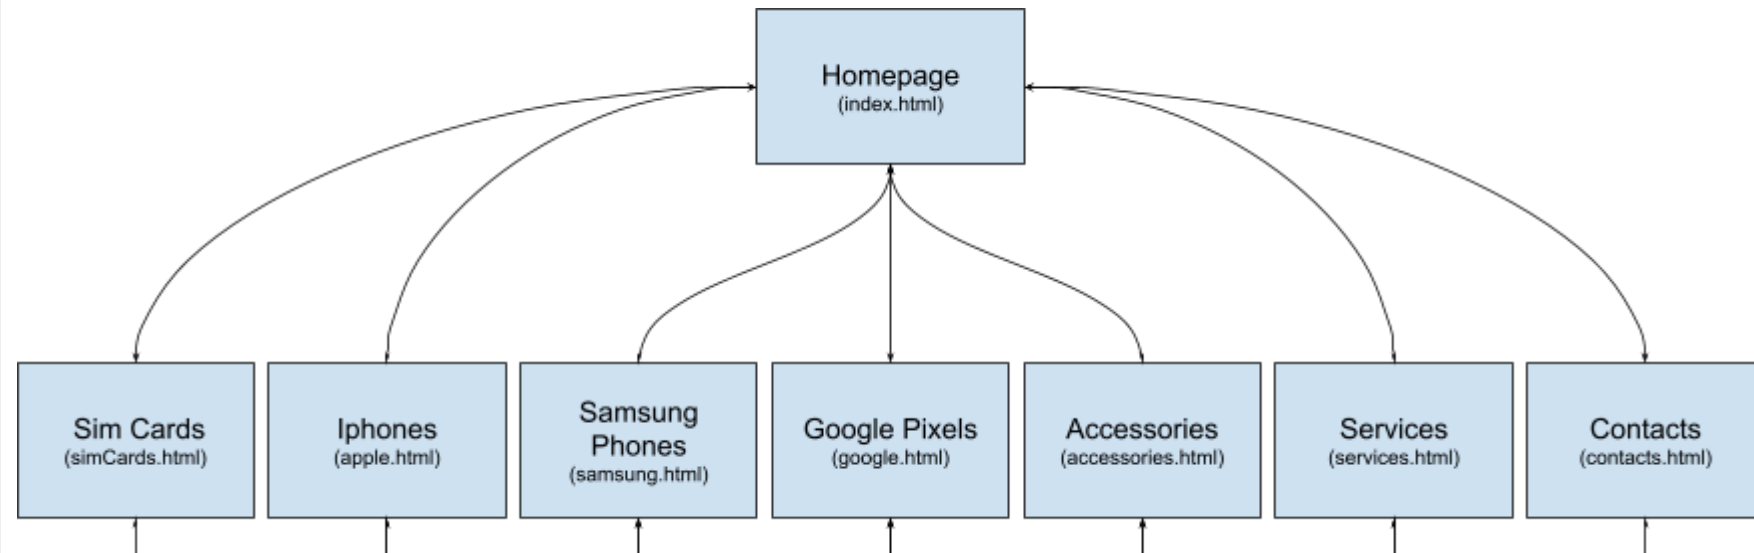

Purpose, User Requirements and Audience

The audience will be people interested in mobile phones, either for deals, accessories or sim cards. Most people in the target audience will be adults. The user requirements are having easy navigation, easy to read text and interactivity.

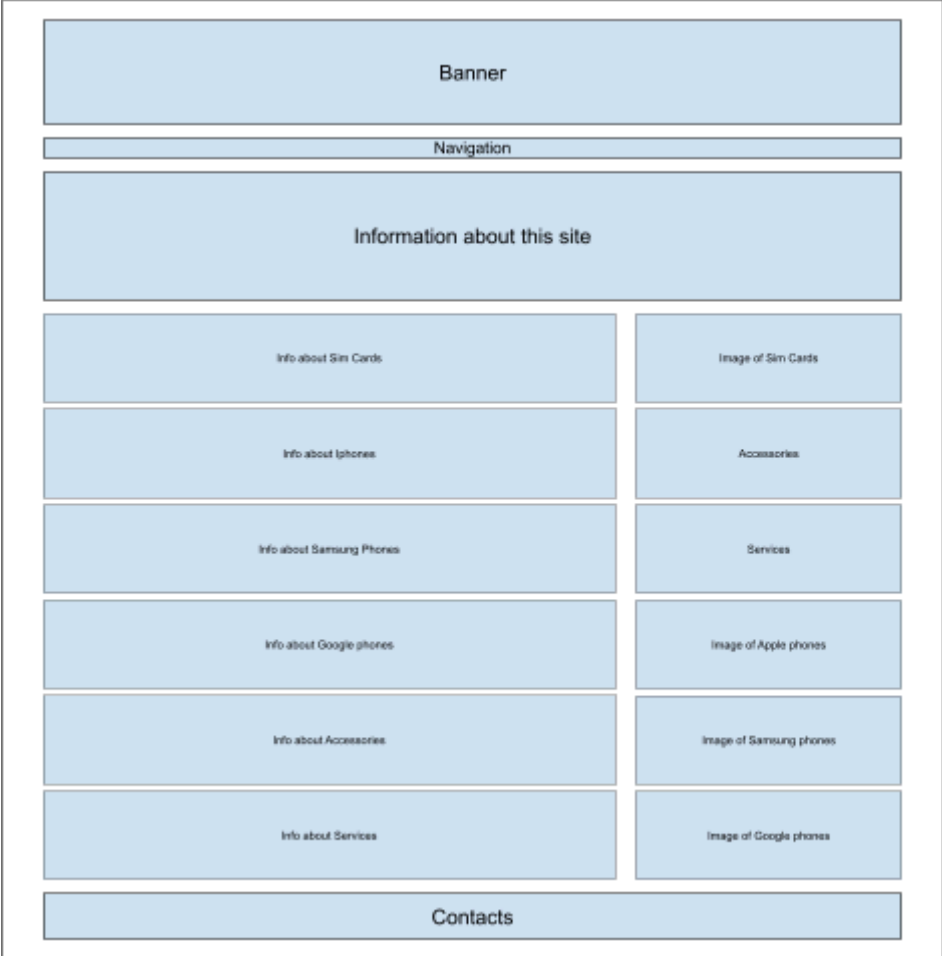

All text should be in Arial to keep it easy to read, Preferably a white background, with a text size of 16px with black text, i am also going to use a primary colour of some sort of blue. I chose these colours as they are plain and easy to read off of.

There needs to be at least 8 pages in the site with easy internal navigation between each one with two external hyperlinks. In one of these 8 pages there must be at least a single table full of information. There also must be at least 4 assets: images, videos and sounds. There also must be interactivity apart from hyperlinks and hotspots. Finally there must also be a linked online forum.

Sitemap

File name:	index.html	Page Title:	Homepage
Page Purpose:	The first page seen when accessing the site, with an overview of information for each section		

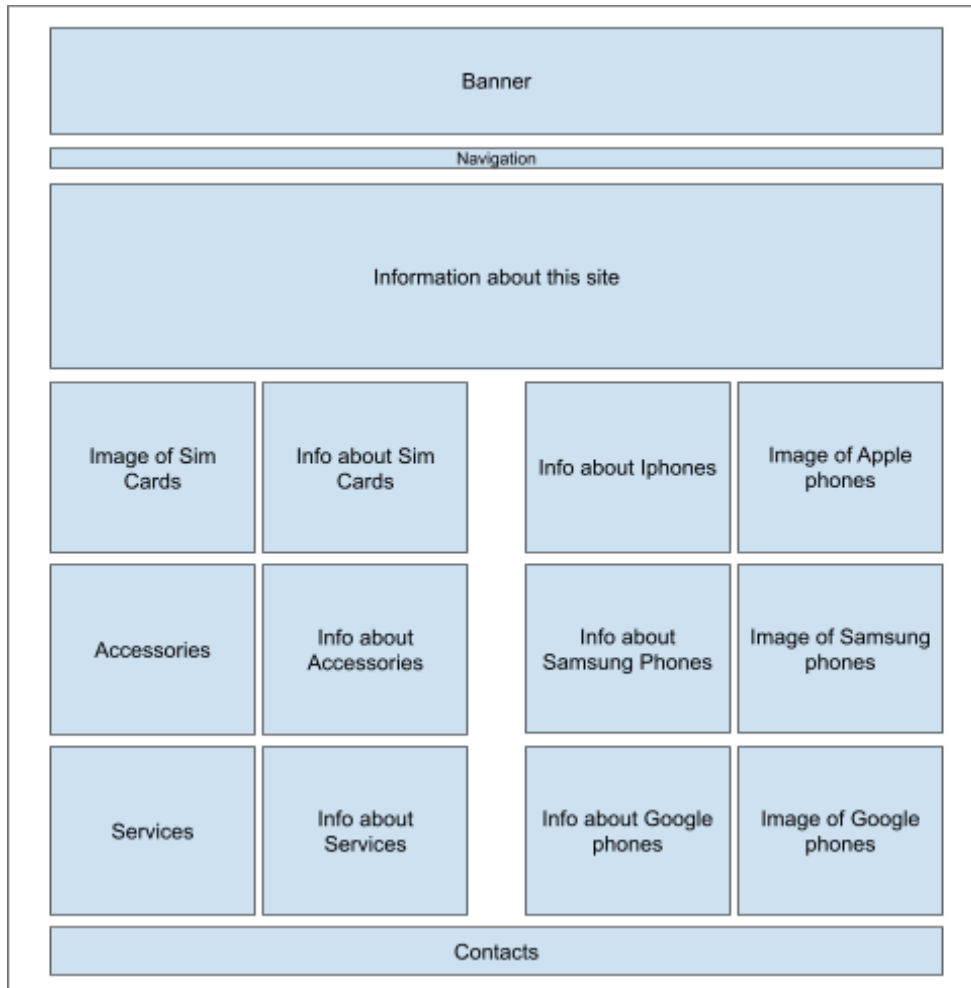

Storyboard	Files/Assets Used on this page
	Banner.png SimCards.png Accessories.png Services.png Iphone.png SamsungPhone.png GooglePixel.png
	Interactivity on this page Hotspots on each image of their selected thing linking to the other 6 pages with that information, this acts like a more specific navigation bar with information and an image of what they link to. With contacts at the bottom to lead to a contacts page, this is a part of the template. Hyperlinks in the information about phones leading to their respective company, directly linking to the companies in the text so if people want more information they can go to the websites.

Links: *(internally to other pages, bookmarks, external websites, email)*

Internal: Simcards, Iphones, Samsung Phones, Google Phones, Accessories, Services, Contacts.

External: A link to Apple, Samsung, and Google's phone e-commerances from their info.

Alternative solutions for this page

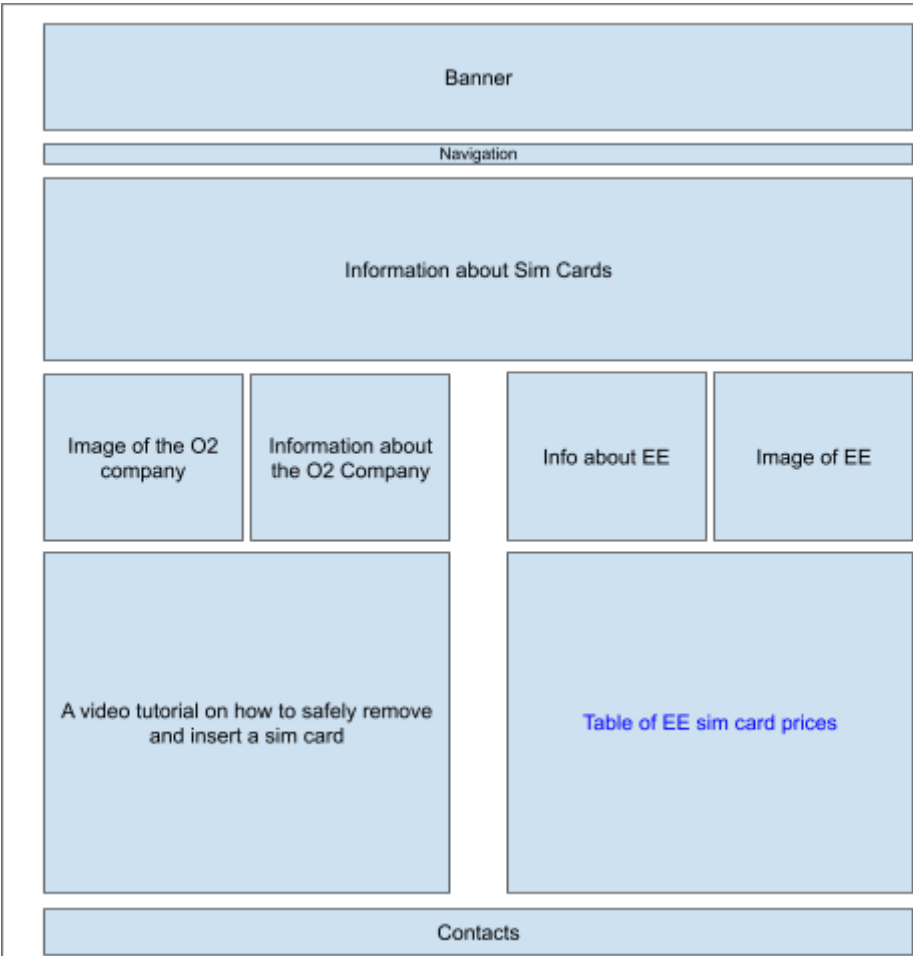

This design wasn't used because it was far too complicated, containing 4 total columns which is too complex for me to do with my current coding skills.

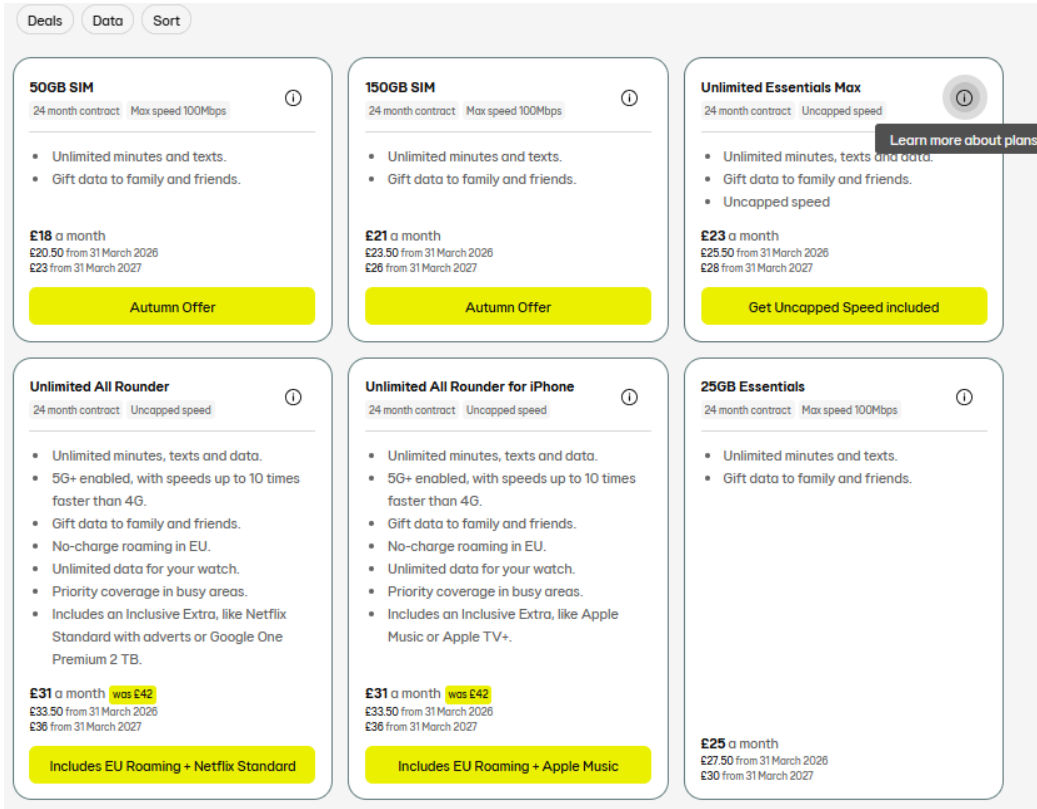

Links: (internally to other pages, bookmarks, external websites, email)

Internal: Homepage, Iphones, Samsung Phones, Google Phones, Accessories, Services, Contacts.
External: A youtube video, O2 and EE

Alternative solutions for this page

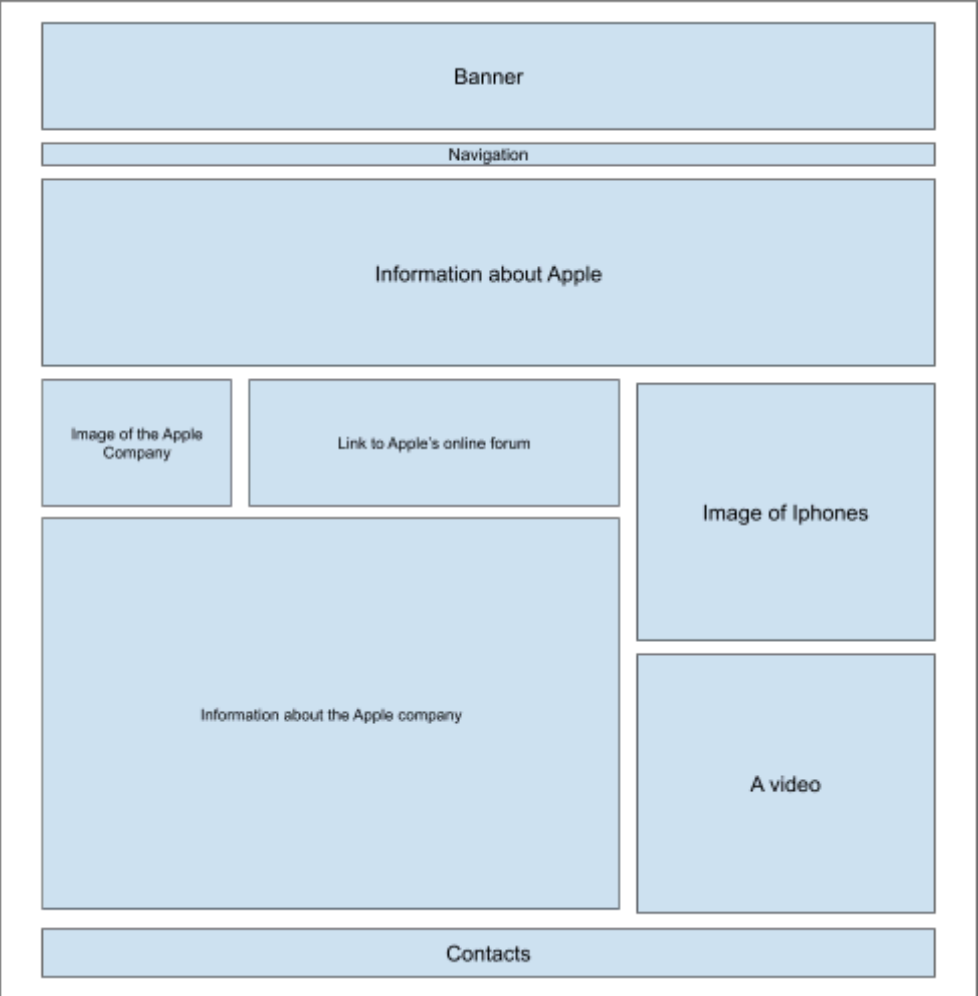

I decided against it as it was much more complicated which was too complex for my current coding skills in HTML.

While the ideas are different I took the idea of having the columns from EE’s sim card page modifying it a bit to allow for showcasing information about sim cards and two companies.

File name:	apple.html	Page Title:	Apple Phones
Page Purpose:	A page about Iphones		

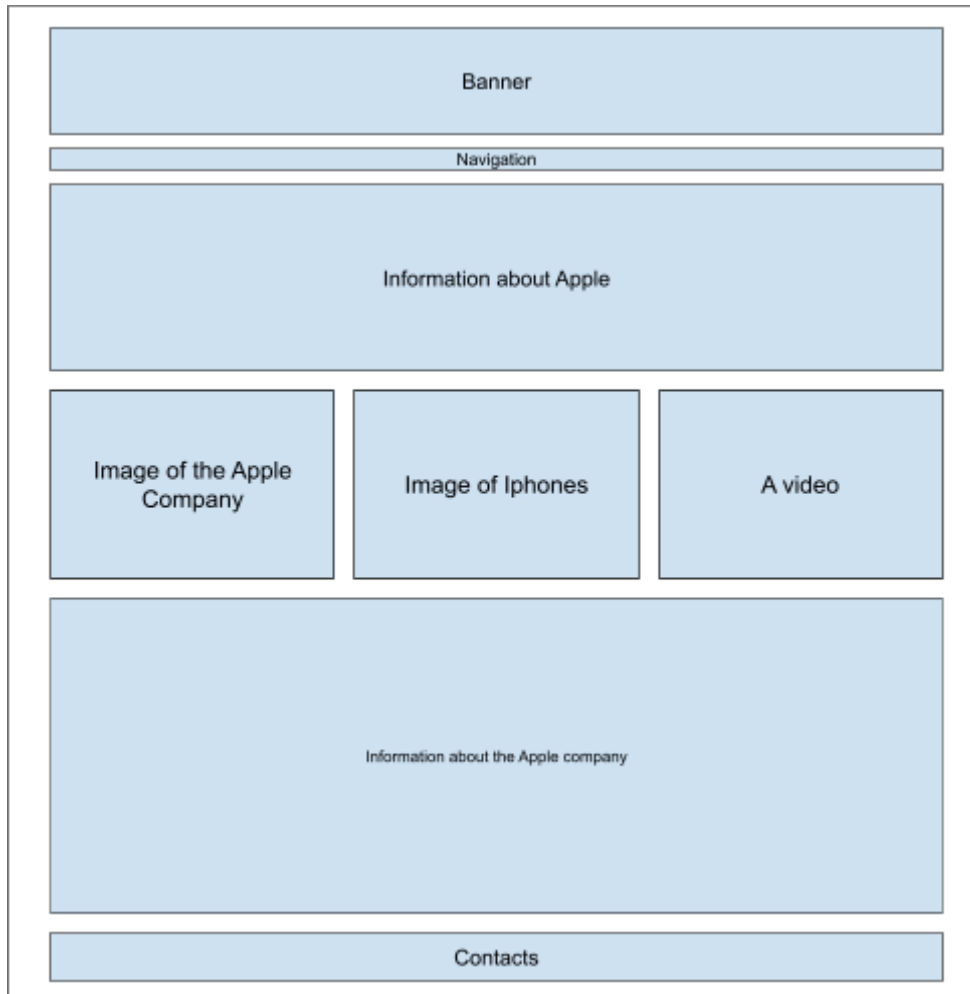

Storyboard	Files/Assets Used on this page
	Banner.png Apple.png Iphones.png A video introducing apple or an Iphone
Interactivity on this page	
The image of apple will be a hotspot to the actual apple website, giving access to the apple website for access to their website. The Iphones will be a similar hotspot specifically going to the Iphones section of Apple, adding more interactivity and more information about Apple and its Iphones. A video introducing the newest Iphone, this adds some extra interactivity on the page to add some media into the website. A link leading to Apple's online forum, to answer questions that aren't in this website. https://discussions.apple.com/welcome	

Links: (*internally to other pages, bookmarks, external websites, email*)

Internal: Homepage, Simcards, Samsung Phones, Google Phones, Accessories, Services, Contacts.

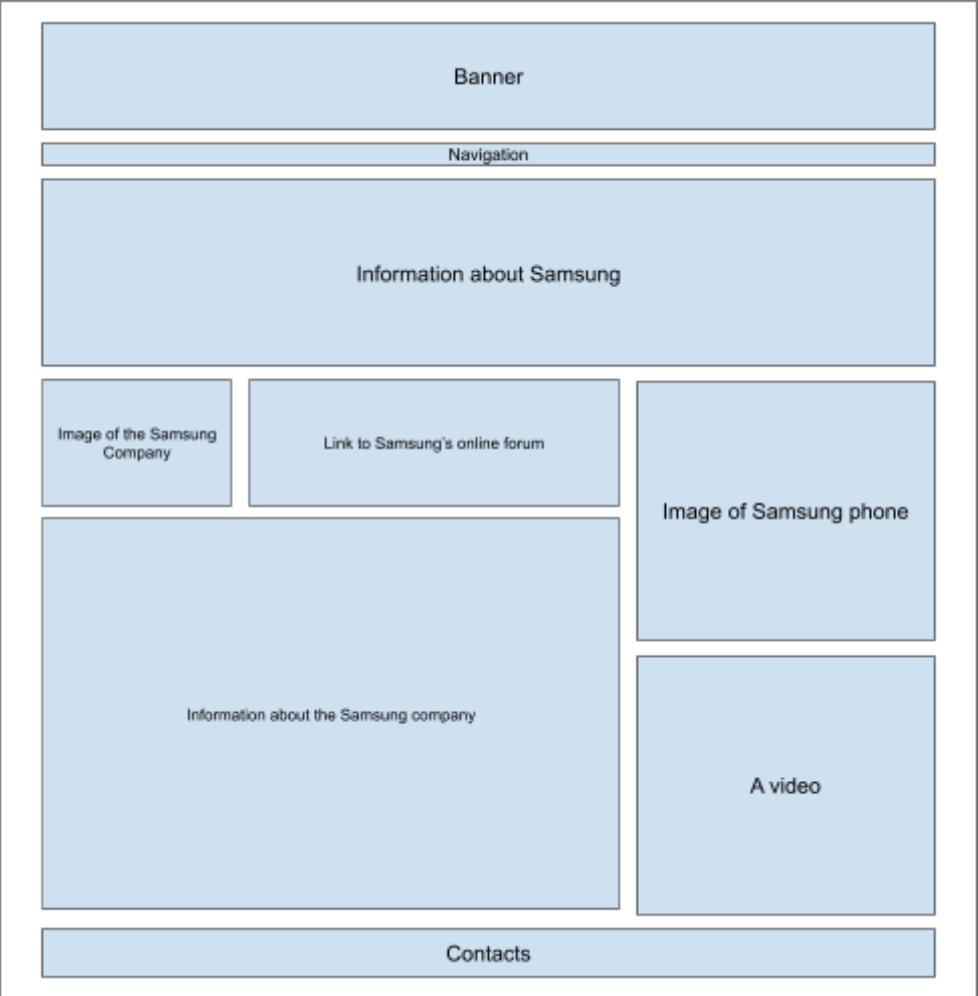

External: Apple, A video of Apple/Iphones

Alternative solutions for this page

Wasn't used due to being much more complicated than I could do as I have not learnt how to do columns in HTML yet.

File name:	samsung.html	Page Title:	Samsung Phones
Page Purpose:	A page about Samsung phones		

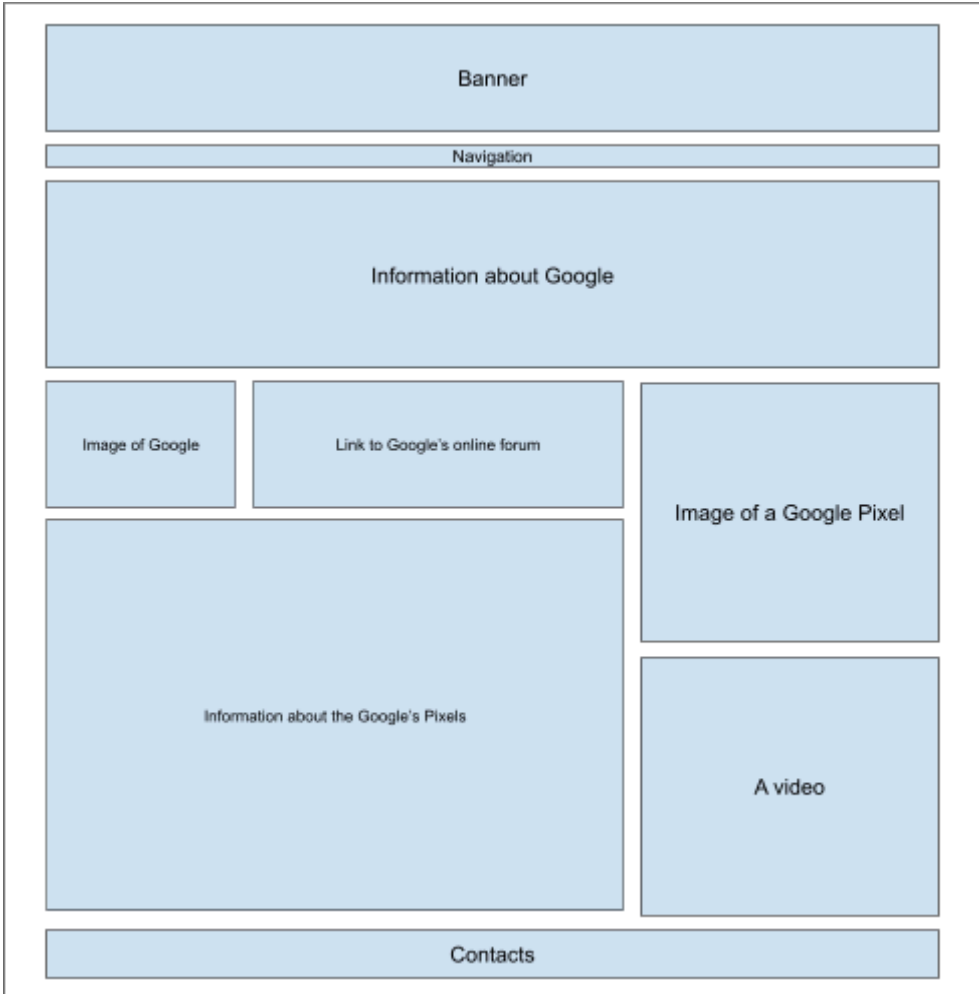

Storyboard	Files/Assets Used on this page
	Banner.png Samsung.png SamsungPhone.png A video introducing the newest Samsung phone
Interactivity on this page	
The image of the Samsung company will be a hotspot to the actual Samsung website. The image of Samsung phones will also link to the Samsung website but directly to the phones section and a video introducing the new Samsung phone similarly to the iPhones page the video provides something for the user to listen and watch rather than just look at a static page. A link to Samsung's online forum. https://eu.community.samsung.com/t5/english/ct-p/uk?page=1&tab=setting:samsung.featured_topics	

Links: *(internally to other pages, bookmarks, external websites, email)*

Internal: Homepage, Simcards, Iphones, Google Phones, Accessories, Services, Contacts.
External: Samsung, A video of the newest Samsung phone

Alternative solutions for this page

File name:	google.html	Page Title:	Google Pixels
Page Purpose:	A page about Google pixels		

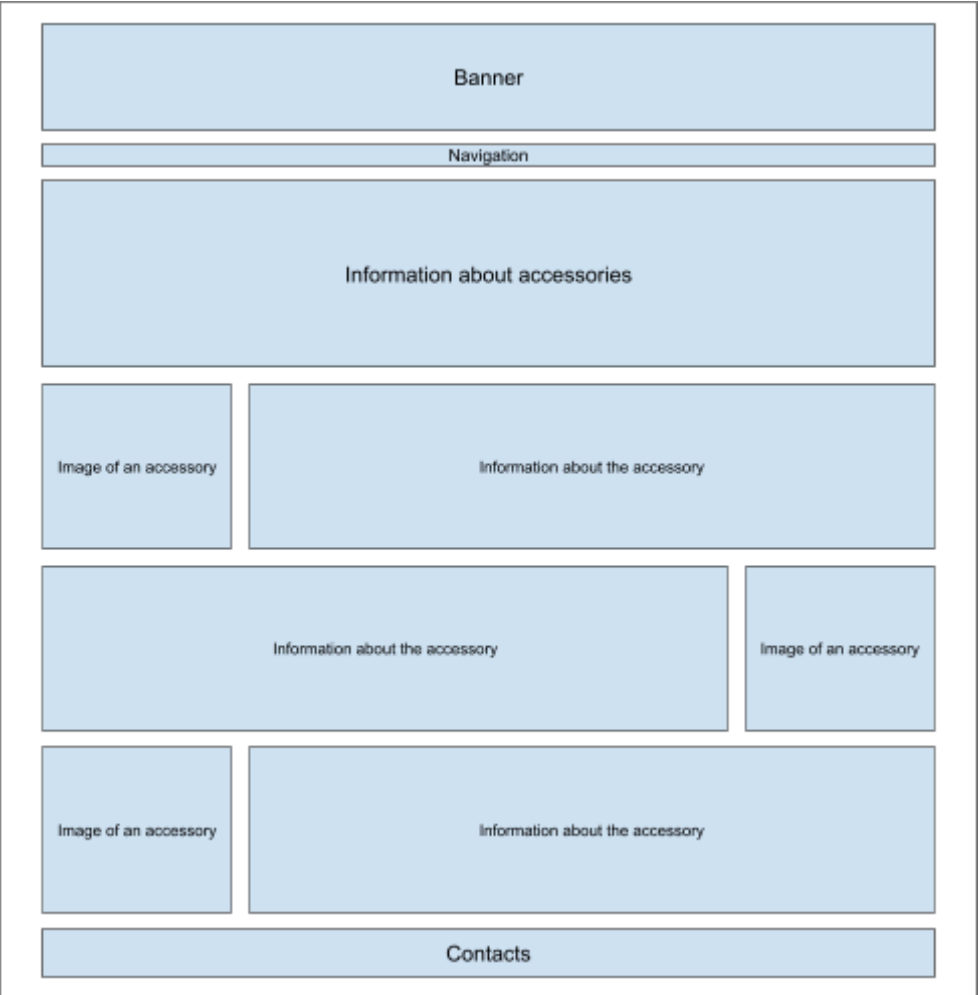

Storyboard	Files/Assets Used on this page
	Banner.png Google.png GooglePixel.png A video introducing the newest Google pixel
Interactivity on this page	
The image of a Google pixel will link directly to the google store page where you can purchase them and the video being about the newest google pixel both of these provide more information they may not be shown inside the website while also providing more information that may be provided in video or link. A link to google’s online forums for answering questions people may have. https://support.google.com/pixelphone/community?hl=en-GB	

Links: *(internally to other pages, bookmarks, external websites, email)*

Internal: Homepage, Simcards, Iphones, Samsung Phones, Accessories, Services, Contacts.
External: A video of the newest Google phone

Alternative solutions for this page

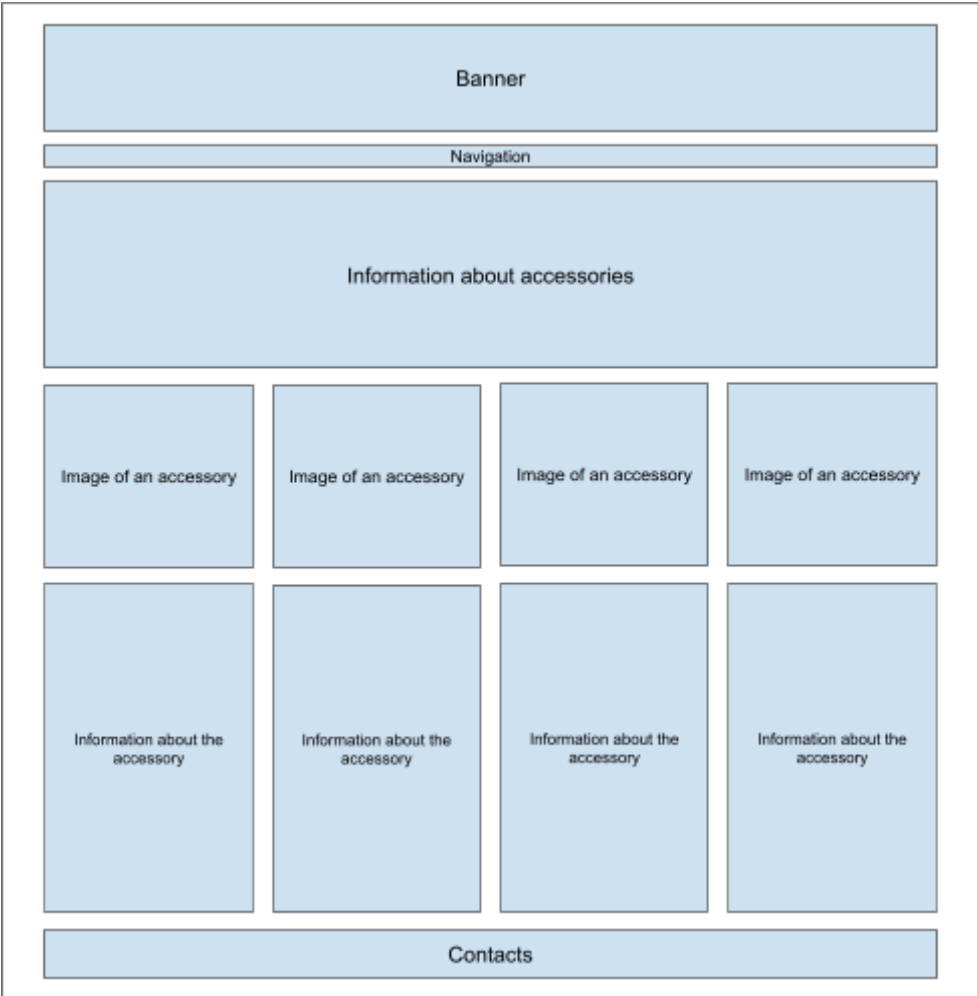

File name:	accessories.html	Page Title:	Accessories
Page Purpose:	A page about accessories		

Storyboard	Files/Assets Used on this page
	Banner.png Accessory1.png Accessory2.png Accessory3.png
Interactivity on this page	
Each accessory image will be a hotspot that leads to their respective store. This is to take people to see what the accessory is about like a phone case and find out information about it and be able to find an e-commerce site for it.	

Links: (internally to other pages, bookmarks, external websites, email)

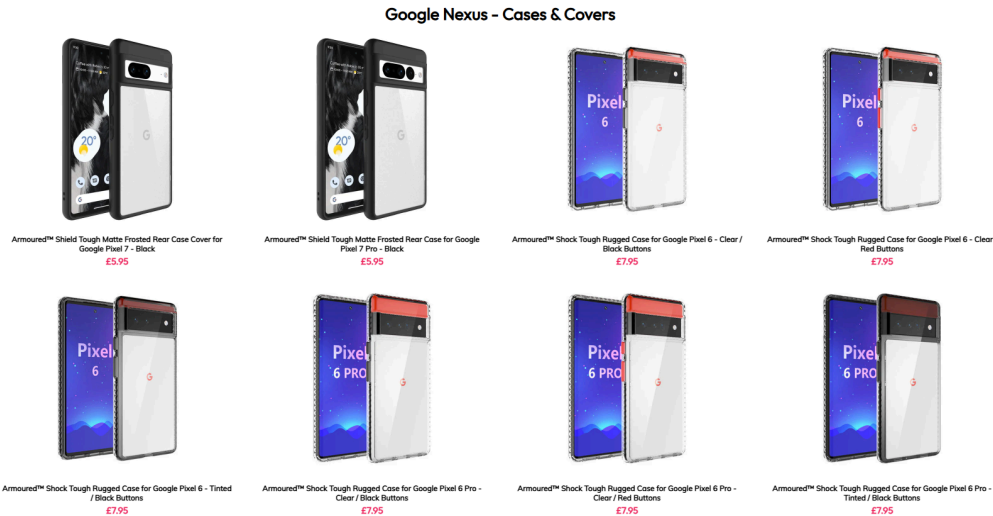

Internal: Homepage, Simcards, Iphones, Samsung Phones, Google Phones, Services, Contacts.
External: 3 different sites where an accessory can be bought.

Alternative solutions for this page

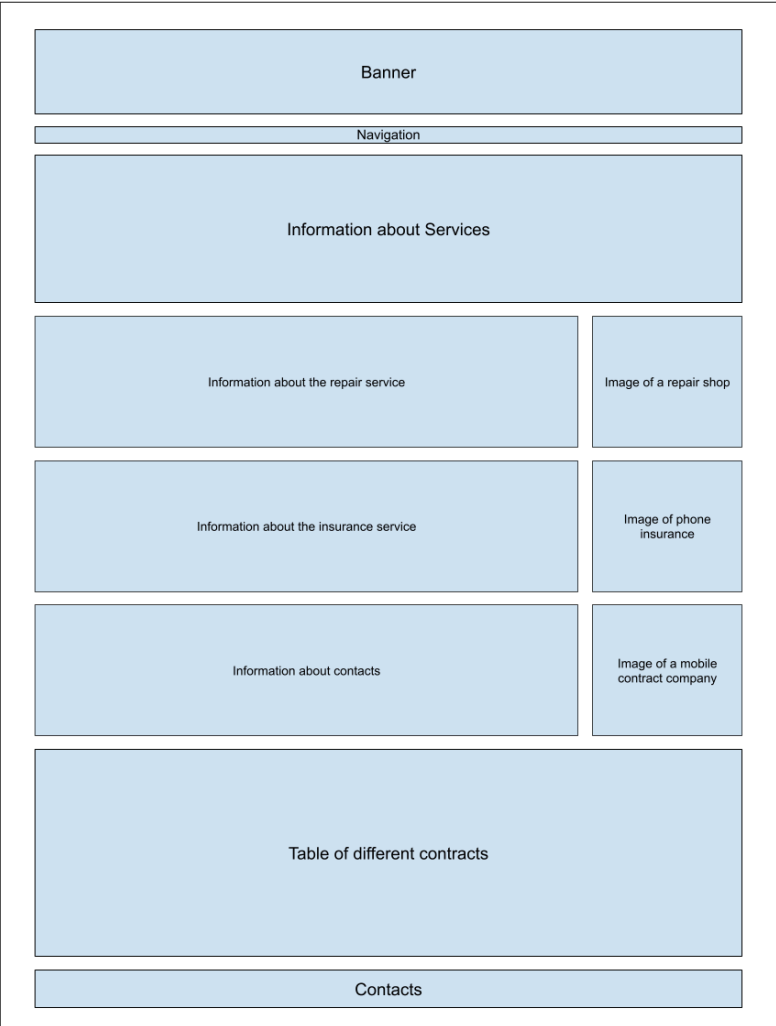

This wasn't chosen due to the complexity of the concept as it contains 4 columns and I don't know how to do columns in HTML, instead I went with a less complex version while still keeping it visually appealing.

TMG

The idea came from Google Nexus and how it displayed its phones, I took the four column idea and modified the bottom row to contain information about each accessory rather than more images.

File name:	services.html	Page Title:	Services
Page Purpose:	A page about the services		

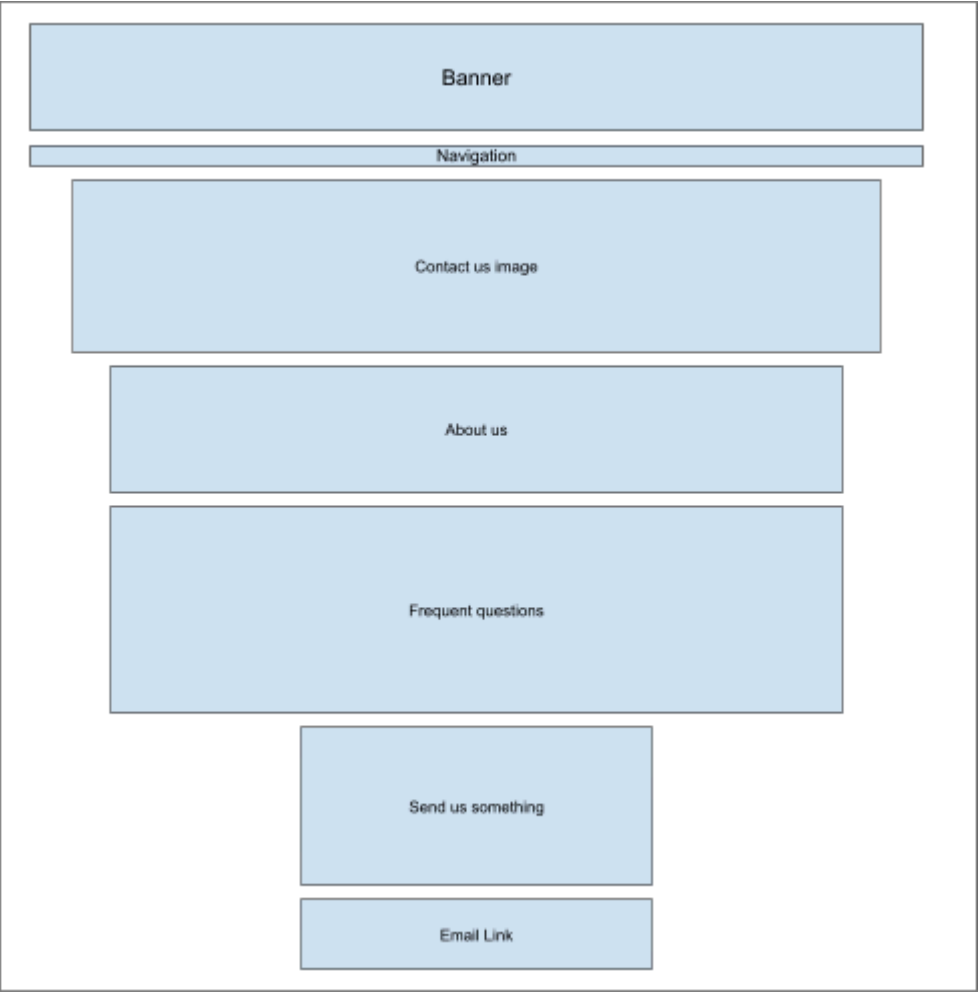

Storyboard	Files/Assets Used on this page
	Banner.png Repair.png Insurance.png Contact.png
	Interactivity on this page The repair shop image will be a hotspot and lead to the respective website of the repair shop. The image of phone insurance will also be a hotspot leading to its respective website. Finally the images of a mobile contract company will lead to a main contract site. Each hotspot here adds interactivity into the site giving the user more things about mobile phone accessories that the site doesn't tell.

Links: *(internally to other pages, bookmarks, external websites, email)*

Internal: Homepage, Simcards, Iphones, Samsung Phones, Google Phones, Accessories, Services.
External: a repair shop, Phone insurance website, and a website about paying monthly for phones

Alternative solutions for this page

File name:	contact.html	Page Title:	contact
Page Purpose:	A page about contact		

Storyboard	Files/Assets Used on this page
 The storyboard diagram illustrates a vertical layout of page elements. At the top is a large rectangular box labeled 'Banner'. Below it is a thin horizontal box labeled 'Navigation'. This is followed by a large rectangular box labeled 'Contact us image'. Below that is a rectangular box labeled 'About us'. The next element is a large rectangular box labeled 'Frequent questions'. At the bottom are two smaller rectangular boxes stacked vertically, labeled 'Send us something' and 'Email Link'.	Banner.png contactUs.png
	Interactivity on this page The Email link will link directly to Mobile World Station's Email, this provides a method of contact with Mobile World Station to ask questions.

Links: *(internally to other pages, bookmarks, external websites, email)*

Internal: Homepage, Simcards, Iphones, Samsung Phones, Google Phones, Accessories, Services.
External: Email link

Idea from

Frequently asked questions

Find answers to common questions about Google data centers and our communities.

General

- What is a data center?

▼
- Can I visit a data center?

▼
- What's it like to work in a data center?

▼
- Can I take photos of the data center?

▼
- I am a member of the press and am interested in data centers.

▼

Google has frequently asked questions which can be searched for, having something like this in the contacts page can help solve some small frequent problems.

Asset/Sources Log

Description of asset	File name	Source	Modifications made	Where used	Where stored
